

Press Release: Saitek announces GM3200 Laser Mouse

Bristol — 10 May 2006, Saitek (www.saitek.com) today announced the launch of the GM3200 Laser Mouse.

The new GM3200 Laser Mouse is designed for high-performance PC work and combines the latest precision technologies with ergonomic design for hours of stress-free use.

Mouse resolution is switchable up to 3200 DPI with 4-stage on-the-fly user selection to match mouse speed to office task or game environment. The 4.5 mega pixels per second report rate also accelerates mouse movement up to 20G to instantly communicate mouse commands to the PC for lightning responses.

The GM3200 features Saitek's new SpeedGlide® system of adjustable weights and Teflon feet area so that mouse momentum can be fine-tuned to suit personal preferences and use, while 3 buttons and scroll wheel with finger-hugging contours offer precise touch and total control. The four buttons, including shift to double up on commands, can be programmed using Saitek's SST software, with mouse settings and controls saved as game-specific profiles, selectable using the Profile button.

Commenting on the announcement of the GM3200 Laser Mouse, Rob Handoll, Saitek Product Manager said: "The GM3200 is the ultimate mouse for discerning gamers or PC users who value high speed, precision, accuracy and total adjustability. Why invest in a high performance PC and use it with a low performance mouse?"

About Saitek:

Saitek entered the Electronic Chess and Intelligent Games Market in 1979 and rapidly became the market leader - a position the company retains today.

In the early 1990s, Saitek diversified into PC Peripherals, developing and manufacturing high-end products with the emphasis on quality, design and innovation. Saitek launched its first PC Game Controller in 1994 and by 2004 had taken the number two worldwide position, dominating the flight simulation sector. The range was broadened to include products such as the award-winning Cyborg joystick, X52 Flight Control System and a range of award-winning PC gamepads.

A further expansion led Saitek into developing a Mobile Solutions range, designed to improve and enhance computing in the home, office and on the move. These products focus on Input, Connectivity and Multimedia.

Building on its experience of interaction with PCs, in 2005 Saitek launched a range of simple, innovative and practical, Hi Fidelity audio products. These products give the user the freedom to listen to music where they want and how they want and, above all, to take control of their digital entertainment environment.
